Job Description: Technology Architecture Lead – Retail Jewellery

Location: Mumbai
Department: IT & Digital
Reports To: Head of IT
Role Type: Full-time

Role Overview

We are seeking a Technology Architecture Lead to design and oversee the end-to-end technology architecture that powers our omnichannel jewellery retail ecosystem. This role ensures our digital, store, backend, data, and AI systems are scalable, secure, resilient, and ready for future innovation.
You will define the architecture vision, integration patterns, API governance, and technical standards needed to build a high-performing digital foundation across mobile app, website, stores, POS, ERP, CRM, supply chain, and data platforms.

Key Responsibilities

1. Architecture Vision & Blueprint

- Own the enterprise technology architecture for all digital and retail systems.
- Define scalable and modular system architecture, ensuring performance, security, and maintainability.
- Establish the long-term architectural roadmap aligned with business and digital strategy.

2. Integration & Platform Architecture

- Design integration patterns across:
  - POS (Point of Sale)
  - ERP (Enterprise Resource Planning)
  - CRM (Customer Relationship Management)
  - OMS (Order Management System)
  - PIM (Product Information Management)
  - CDP (Customer Data Platform)
- Ensure reliable and real-time data flows across channels (inventory, pricing, gold-rate logic, product attributes).
- Create and govern the API (Application Programming Interface) standards, specifications, and versioning.

3. Technology Governance & Standards

- Define development standards, best practices, documentation guidelines, and architectural principles.

- Conduct architecture reviews, solution validation, and technical checks for all new features and platforms.
- Set non-functional requirements (NFRs) including scalability, uptime, response time (latency), and security.

4. Security, Compliance & Resilience

- Work closely with InfoSec to ensure adherence to security protocols, encryption, data protection, and compliance including DPDP (Digital Personal Data Protection Act).
- Design for disaster recovery, failover, redundancy, and high availability (>99.5% uptime).

5. Data & AI Enablement

- Architecture support for:
    - Customer 360
    - Analytics pipelines
    - Event models and schemas
    - AI/ML workloads (recommendations, visual search, automation)
- Ensure data quality, lineage, and scalable ingestion models for omnichannel analytics.

6. Vendor & Partner Solution Oversight

- Evaluate technical architecture of vendors and system integrators.
- Drive solution comparisons, POCs (Proof of Concepts), and scalability assessments.
- Review vendor deliverables for compliance with architecture and security standards.

7. Cross-Functional Collaboration

- Work closely with Product, Engineering, UX, Stores, Supply Chain, CRM, and Data teams.
- Translate business needs into scalable technical solutions.
- Support technical decision-making, risk identification, and dependency management.

8. Performance & Reliability

- Ensure strong observability: logging, monitoring, alerting across all platforms.
- Design performance-optimized systems for high traffic periods (festivals, sale events, gold-price spikes).

Success Metrics

- Robust architecture delivered on schedule across initiatives
- Reduction in system downtime and production incidents
- Improved API performance and integration reliability

- Alignment of systems to architectural standards and documentation quality
- Successful architecture reviews with fewer reworks
- Scalable foundation supporting new products and AI-led capabilities
- Faster delivery velocity due to cleaner architecture and integrations

Qualifications

- 8–12 years in technology architecture, solution design, or systems engineering.
- Strong understanding of retail or e-commerce architectural patterns.
- Deep expertise in:
    - Microservices
    - Cloud platforms (AWS/Azure/GCP)
    - API management
    - Event-driven architecture
    - Scalability and performance engineering
- Experience in multi-system integration across POS, ERP, CRM, OMS, and commerce platforms.
- Strong documentation and communication skills; ability to influence technical and business stakeholders.

What Makes You a Great Fit

- Systems thinker with an obsession for high-quality architecture.
- Balances speed with long-term scalability.
- Strong technical leadership and vendor management capabilities.
- Passion for building future-ready, resilient digital ecosystems.
- Ability to challenge, guide, and elevate engineering teams.
